

NEW PHYSICS THEORY

A new physics theory based upon the premise that all theory should be reducible to empirical properties. The two empirical properties, from which all mechanical knowledge is gained, are distance and time. The fundamentals of theoretical physics are redefined to reflect this premise. The physical properties introduced are directly implied by measurements of distance and time.

James A. Putnam

TABLE OF CONTENTS

TWO ELEMENTS OF PHYSICAL ACTION 1

- Constant Velocity 2
- Change of Velocity 2
- Change of Velocity Per Unit Distance 4
- Energy of a Freely Falling Object 5

LIGHT AND RELATIVITY TYPE EFFECTS 7

- Measuring the Speed of Light 7
- Interpreting Pound-Rebka 9
- Speed of Light 13
- Acceleration Due To Gravity 15
- Freely Falling Matter and Light 18
- Gravitational Energy 19
- Variable Length of Photons 23
- General Relativity Type Effects 25
- Origin of Special Relativity Type Effects 32
- Particle to Photon Energy Transfer 33
- Speed and Special Relativity Type Effects 39
- Electromagnetism and Relativity Type Effects 44
- Particle Energy and Frequency 48
- Photon Energy 50
- Compton Effect 55
- Photon Momentum 56

ELECTRIC EFFECTS AND THE HYDROGEN ATOM 59

- Atomic Radius 59
- Electric Charge 63
- Electric Permittivity 65
- Fine Structure Constant 68
- Magnetic Permeability 70

ORIGIN OF ELECTROMAGNETIC RADIATION 71

- Varying Electric Field 71
- Definition of Electric Field 75
- Electric Field Varying With Distance 75
- Interpreting Magnetic Permeability 78
- Interpreting Electric Permittivity 79
- Electromagnetism and the Speed of Sound 79
- Defining the Units of Physics 83
- Electric Potential 86
- Magnetic Field Varying With Distance 87
- Origin of Atomic Electric Effects 88

ELECTRON ATOMIC ENERGY LEVELS 88

- Wave Particle Duality 89
- De Broglie Relation 89
- First Atomic Energy Level 93
- Higher Atomic Energy Levels 96
- The Bohr Atom 96
- Electric Force Quantum Numbers 98

FUNDAMENTAL FREQUENCY RELATIONSHIPS 99

- Planck's Constant 99
- Boltzmann's Constant 99
- Momentum and Frequency 101
- Temperature and Frequency 102

THERMODYNAMIC ENTROPY 103

- Thermodynamic Equilibrium 103
- Thermodynamic Entropy Definition 104
- Interpreting Planck's Constant 111
- Analyzing Planck's Constant 113
- Defining Temperature 114
- Defining Boltzmann's Constant 115
- Defining Frequency 115

THE NATURE OF MASS 116

- Mass and the Radius of the Hydrogen Atom 116
- Universal Gravitational Constant 120
- Particle Polarity 125
- Photon Electromagnetism 126
- Gravity 127
- A New Equivalence Principle 131
- Nuclear Physics 132
- Neutrons 133
- Formation of Atoms 134
- Protons 135
- Quark Theory and the Speed of Light 136
- Creation of Matter 137
- Antimatter 138

THE STRUCTURE OF THE UNIVERSE 139

- Natural Units of Measurement 139
- Continuity and Discontinuity 140
- Cosmic Background Radiation 140
- Energy and Momentum 141
